**FOR IMMEDIATE RELEASE
ACTION ALERT**

SOETORO (AKA BHO) Importing Active Tuberculosis

May 24, 2016 – Statement of EDWARD C NOONAN, 2016 Presidential Candidate:

On May 22nd, patriot [Jim Hoft](#) posted this breaking info: “Four Obama (Soetoro) Refugees Diagnosed with Active Tuberculosis in Indiana.” Hoft reports:

Four refugees were diagnosed with active tuberculosis in Indiana.

Four refugees sent to Indiana by the federal Office of Refugee Resettlement in 2015 were diagnosed with active tuberculosis once they arrived in the Hoosier State, according to the Indiana Department of Health.

Active tuberculosis (TB) is infectious, while so-called “latent TB” is not infectious. But 10 percent of those infected with latent TB develop active infectious TB.

In 2015, almost 400 migrants with latent TB settled in Indiana, according to state records. The state’s TB rate had declined for the 54 years up to 2010, but it now increasing as more migrants settle in the state.

“Tuberculosis is one of the most lethal infectious diseases in history,” Dr. Jane Orient, executive director of the Association of American Physicians and surgeons, told Breitbart News last week. “It is easily transmitted, say on a public bus [and] increasingly, it is becoming highly resistant to all our antibiotics,” she said.

The disease is airborne and is “caused by a group of bacteria called Mycobacterium tuberculosis. General symptoms may include a prolonged, productive cough, blood-tinged sputum, night sweats, fever, fatigue, and weight loss,” the Indiana Department of Health reports.

The [American Resistance Party](#) has learned that the April 2016 edition of the [Refugee Health Quarterly](#), says that in 2015, 22 percent of refugees screened tested positive for LTBI (latent tuberculosis infection). This is unacceptable. Before an alien is allowed into this nation, they should be 100% DISEASE FREE!
