**FOR IMMEDIATE RELEASE
ACTION ALERT**

**RE: SEPTEMBER 11, 2001
9/11 WTC Revisited**

09/11/18 – EDWARD C NOONAN, Former 2012 & 2016 Presidential Candidate alert:

The **American Resistance Party** continues to reject the official statements concerning the **WTC 9/11** events. Instead, these are the true observations:

THE PLANE DOES NOT FIT

The space between the perimeter of the towers to the central steel core was 60 feet on two sides and 35 feet on the other two sides.

We would expect a sharp deceleration as the plane crumpled to fit into the 60 feet of space (North Tower, Flight 11) and 35 feet of space (South Tower, Flight 175) from the perimeter to the steel core.

Instead both planes enter the towers entirely at uniform motion.

A 767 is 159 feet long so most of the plane has got to be outside of the tower in both cases since there is simply no room for the entire length of the plane to crumple into.

There is no plane or plane wreckage at all to be seen in the hole of either tower in any video or photos.

“A Boeing 767 is 156 feet wide. The width of the hole in the South Tower was 106 feet wide and the width of the hole in the North Tower was 125 feet wide. 50 feet of the Boeing 767 that allegedly struck the South Tower cannot fit into the size of the hole that is in the North Tower...a hole that was supposedly created by a Boeing 767 with a wingspan of 156 feet. 31 feet of the Boeing 767 that is said to have hit the North Tower cannot fit into the size of the hole that is in the North Tower...a hole that was supposedly created by a Boeing 767 with a wingspan of 156 feet. Some people may say that the wings of the Boeings merely folded back

as the aluminum portion of the wings came in contact with the exterior steel columns. However we can see this is not what happens in the videos. Even so the aluminum wings would not neatly fold back they would be torn off.”

If it is impossible, it is not true.

Your Sunday Message

To say the planes (aluminum balloons) went through those steel beams because of their speed

is like saying if you throw butter hard enough, it can destroy a knife.

This is what happens when a bird hits a plane
